

Shieldzorb Solution

Absorber Enhanced Board Level Shielding

ABSORBER ENHANCED BOARD LEVEL SHIELDING:

Shieldzorb Solution integrates absorber with board level shielding (BLS) or so-called shielding can to damp cavity resonant, to reduce unwanted coupling of electronic components in the BLS and/or coupling between components in the BLS and nearby RF antennas. At high frequencies, cavity resonant of BLS can cause serious deterioration of its shielding effectiveness at cavity resonant frequency. Unwanted coupling with nearby RF antennas might lead to desensitization of those RF components while the cross talk within the BLS might xxxx. Shieldzorb solution can effectively fixing those problems.

BLS mentioned here can be stamped/deep draw shielding can or die casting/machined aluminum alloy shielding covers. There are a large variety of absorber options for different frequencies. Fully automated assembly process is available to make high volume production cost effective.

FEATURES

- BLS with absorber attached
- Wide variety of absorber options
- Customized BLS design and material options
- EM Simulation support
- Automated assembly
- Ease of maintenance
- RoHS compliance and Halogen free

BENEFITS

- Higher shielding performance
- Elimination of unwanted coupling
- Design support to solve the issue at earlier design stage
- Simpler supply chain

MARKET & APPLCATION

- Automotive: mmWave radar
- Telecom: 5G Active Antenna System

Shieldzorb Solution

Absorber Enhanced Board Level Shielding

APPLICATIONS

A study of three ports BLS structure was done with CST software. The EM performance comparison between general BLS and Shieldzorb solution can be found in below graphe.
